Office Action Summary

Application No.

09/677,502

Applicant(s)

HASHIBE ET AL.

Examiner

Rabon Sergeant

Art Unit

1711

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 05 October 2005.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1, 2, 4, 6 and 8-12 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1, 2, 4, 6 and 8-12 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Art Unit: 1711

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on October 5, 2005 has been entered.
2. Claims 11 and 12 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Support has not been provided for claiming that the film has an average reflectance of "about 15% for visible light" (claims 11 and 12). The specification only provides support for reflectance values for visible light of 15% or less (page 3) and 12% and 19% (Table 1). Since "about 15%" encompasses values that exceed 15%, the language encompasses values that are not supported by the specification. Data set forth within examples provides support only for values that correspond to the data. Therefore, the position is maintained that there is no evidence that applicants were in possession of values that exceed 15% at the time of invention, other than the experimental value of 19%.
3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 1711

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

4. Claims 1, 2, 4, 6, and 8-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Friedman et al. ('704) in view of Hentzelt et al. ('668) and further in view of Terneu et al. ('687), Plumat et al. ('978), Arfsten et al. ('578), Benson et al. ('154), and Stephens ('426).

Friedman et al. disclose the production of fire screening protective glazing laminates, wherein a layer of polymeric material, that corresponds to that of applicants, is sandwiched between layers of fireproof glass plates. Friedman et al. further disclose that the glass plates may be surface treated with materials that yield heat reflectance. See abstract; column 2, lines 30+; and column 6, lines 18-29, especially column 6, line 26.

5. Friedman et al. are silent with respect to the limitations of instant claim 8 and the surface treatments that may be applied to the glass; however, the use of double glazing, additional glass plating attached through an air layer, and infrared reflecting materials, such as metal doped oxides, were known to be useful for such specific applications as transparent fire-screening panels. This position is supported by the teachings of Hentzelt et al. See abstract; figures 2 and 3; and column 3, lines 5-47, especially lines 38-47, within Hentzelt et al. Furthermore, Terneu et al. also disclose the use of double glazing to enhance insulation characteristics of glass panels.

Art Unit: 1711

See figures and column 6, line 11. Additionally, Terneu et al., Plumat et al., Arfsten et al., Benson et al., and Stephens serve to reinforce the teaching within Hentzelt et al. that doped metal oxides were well-known infrared reflecting glazing materials for glass at the time of invention.

See abstract within Terneu et al. See column 4, lines 17-40 within Plumat et al. See abstract within Arfsten et al. See column 2, lines 45-60 within Benson et al. See column 3, lines 43-60 within Stephens.

6. Therefore, the position is taken that one of ordinary skill in the art would have been motivated by the teachings of the secondary references, especially the teachings of Hentzelt et al., to modify the fire-screening laminates of the primary reference by employing the claimed doped metal oxides as a heat reflecting surface treatment (glazing), in accordance with the teachings of the primary reference, and by further employing such proven insulation techniques as double glazing and the use of an air barrier, so as to maximize the heat reflectance and fire protection characteristics of the resulting fire-screening glass laminates. The position is ultimately taken that applicants have simply employed well-known materials and techniques in accordance with the teachings of the relied-upon references, so as to arrive at the instant invention.

Any inquiry concerning this communication should be directed to R. Sergent at telephone number (571) 272-1079.
